FAQs

What is the future for an Android Developer?

The market for smart phones and tablets is rapidly growing. Hence there is a huge demand for newer applications on these platforms. The mobile application developer is in hot demand.

Do you also cover application development for iPhone and Blackberry?

While Apple's iOS and Blackberry's Operating Systems also have a large market, today the Android Operating System which is Open Source is more pervasive and works on smart phones and tablets. Our course is focused on Android.

Why are you covering Java and Eclipse IDE in the course?

Android applications are written in Java, so you need to be a good Java Developer. Many Android applications use the Eclipse IDE as a development environment, so the student must be strong in that too.

Catch up on the latest technology and be one of the first few to get onboard the new revolution
